## CLOUD PRINT UTILITY

There's nothing worse than moving to the cloud to take advantage of the many advantages of a hosted, on-demand solution only to find out that you can't print to local network printers.

SolutionsX has solved this problem with our Cloud Print Utility for Infor CloudSuite Industrial. The application works similar to TaskMan for Infor CloudSuite Industrial monitoring print jobs on the cloud as a service enabling the job to print on locally-installed network printers.

Simply install the small application on an internal server (we recommend your print server) and voila – no more printing nightmares. And best of all, the Cloud Print Utility is maintained for each new version of Cloud Suite Industrial and updated to ensure compliance with all changes Infor makes to the cloud environment.

Cloud Print Utility also works with Bartender labels and any and all other documents you need to print from Infor CloudSuite Industrial.

BarTender.
