*Innovative Enhancements Infor CSI*

PARCEL INTEGRATION LITE

Integration between Infor CloudSuite Industrial (SyteLine) and small parcel shipment providers like UPS, FedEx, and USPS is essential for many manufacturing and distribution businesses.

The SolutionsX Parcel Integration Lite Xten**CSI**on Pack allows you to create the shipment inside any of these three small parcel providers without leaving Infor CSI. Instead, the workflow has been optimized to launch the provider's application directly from Infor CSI with data flowing from Infor CSI to the shipment providers application saving duplicate data entry. Further, the shipment information is then retrieved back to Infor CSI including the shipment cost and tracking link.

There are multiple configuration options available to allow users to control which data flows from Infor CSI to the small parcel shipping application and how data is captured back to Infor CSI. For example, some companies may choose to pass-through shipping costs to the customer while others may prefer to apply a small mark-up to the shipment.

It takes about a half hour to an hour to install, configure, and train your team on Parcel Integration Lite. Contact us today for more information.
