

X: The Challenge

The market is expanding. And that market has been known to get a little volatile. You have trade partners around the world and you need to be ready to meet those partners where they are and in their currency. The daily fluctuations of currency exchange rates is a challenge that impacts the whole business from operations to finance teams. Whether you are a small business just expanding into international trade or a large enterprise with trade partners on every continent you need a solution that ensures you're always working with current, accurate exchange rates. Keeping up with even just two currencies can be a chore and making that data available to your SyteLine (CloudSuite Industrial) environment takes precious time and attention to detail.

Solving for X = RateX powered by SolutionsX

SolutionsX has been there with you in the trenches and we've developed a solution that gives you that precious time back and ensures accuracy with each and every update. RateX leverages the best aspects of the modern web and cloud-based applications by establishing an always-on connection to public exchange rate data. With support for over 200 world currencies including USD, EUR, JPY, and GBP to modern cryptocurrencies like Bitcoin or Ethereum and even Gold or Silver, RateX can address all of your exchange rate needs.

RateX Works for YOU on YOUR Terms

Infor OS (Operating Service) provides the technology needed to seamlessly integrate and automate connections between your SyteLine ERP and the exchange rate API gateway giving you the freedom to schedule updates tailored to your unique business requirements. Need daily updates for Euros and weekly updates for Japanese Yen? No problem. Need to incorporate a new currency with zero advance warning? Add a new currency in just 5 minutes.

Key Features

- **Any Currency** Full support for over 200 world currencies including crypto.
- **Automatic Updates** Monthly, weekly, daily, or even more frequent updates to meet your business needs.
- **Configurable** Update only the currencies you choose at the times you choose.

Technical Features

- **Infor OS Native Administration** All configuration and management of RateX is part of the native Infor OS interface. No extra interfaces or passwords to manage.
- **Exchange Rate API** Fully scalable from a single request per month to hundreds of requests every second. (Account required. Multiple tiers available.)
- **Deployment Options** Deploy to your MT Cloud, Gov Cloud, Hosted, Hybrid, or On-premises (requires Infor OS) environment.
