

## X: The Challenge

You're leveraging the power of Syteline for firearms manufacturing. The manufacturing capabilities are robust, but there are some industry-specific features that are missing. Things like ensuring that your customer base is properly licensed and legally able to purchase your products, and managing regulatory reporting requirements and associated overhead that comes with it.

## Solving for X = ArmorX (with Orchid) powered by SolutionsX

ArmorX (with Orchid) powered by SolutionsX brings functionality directly into the ERP to address industry requirements. Management of industry-specific data and related business processes provides assurance that you are adhering to regulations. Direct integration to Orchid eBound services allows for efficient serial reporting.

**ArmorX (with Orchid) powered by SolutionsX works for YOU on YOUR Terms**  
No more worries of accidental shipments to restricted locations. Manage where (and to whom) your products can ship. Reduce the load on staff and eliminate human error in the reporting process by reporting serialized activity automatically using your existing Orchid eBound account.

### Key Features

- **FFL Management** – Store your customer's Federal Firearm License (and other) numbers and expiration dates. The system will stop (or warn) of transactions with customers that do not have valid licensing.
- **Industry-Specific Product Data** – Manage important product attributes, such as caliber, barrel length, ATF Type, etc.
- **Sales Restriction Capability** – Rules-based restriction architecture to prevent items from being sold to ineligible customers.
- **Bound Book Reporting** – Seamless integration to Orchid eBound for serial number reporting.

### Technical Features

- All data managed within the ERP. No need for ERP users to access separate applications.
- Utilizes API connections to Orchid for reporting the required serial number activities.
- System transactions automatically trigger serial number reporting.
